

AI Hands-On Workshop Walk Out With 3 Tools Working For Your Job

Presented by **Brandon Calloway** | Learn & Leverage AI

Today's Agenda

Today's 4-Hour Journey:

1

Hour 1

What AI Actually Is (no jargon, real talk)

2

Hour 2

Prompt Engineering for YOUR Job

3

Hour 3

AI Agents & Automation

4

Hour 4

Build Your AI Toolkit

📌 You **WILL** leave today with 3 working AI tools.

About Your Instructor

Brandon Calloway

5+ Businesses

Runs multiple companies
powered by AI daily

AI Voice Agents

Built AI voice agents handling
real customer calls

Operator, Not Tech Bro

A business operator who uses AI to get results — based right here in
Delaware

The Promise

By 1:00 PM today, you will:

1 Understand What AI Actually Is

And what it isn't — no hype, no fear

3 See Real Automation in Action

Live demos of AI doing the work

2 Write Prompts That Get Results

Useful outputs for YOUR specific job

4 3 AI Tools Set Up on YOUR Device

Plus a **Monday Morning Action Plan** to start immediately

Hour 1

What AI Actually Is

Demystifying AI for

Real People

Let's Clear the Air

AI is NOT:

- Skynet or the Terminator
- Coming to replace you tomorrow
- Only for programmers and engineers
- Magic that works perfectly every time

AI IS:

- A very powerful assistant
- A tool that makes YOU faster and better
- Available right now, for free, on your phone
- The biggest career advantage since the internet

Think of AI Like This

AI is like having an incredibly smart intern who:

Never Sleeps or Complains

Available 24/7, 365 days a year

Reads 1,000 Pages/Second

Processes information at superhuman speed

Writes Faster Than Any Human

Drafts, edits, and formats instantly

Still Needs YOU

The person who knows how to **direct AI** wins

The Big 4 AI Tools

ChatGPT (OpenAI)

Writing, analysis, brainstorming. **Free tier available.**

Claude (Anthropic)

Long documents, detailed work. **Free tier available.**

Microsoft Copilot

Built into Microsoft 365. Your company may already have it.

Google Gemini

Search, research, Google Workspace integration. **Free.**

Which One Should You Use?

Need	Best Tool
Writing emails, reports	ChatGPT or Claude
Analyzing spreadsheets	Copilot
Research & summaries	Gemini or ChatGPT
Long documents	Claude
Quick questions	Any of them

 **Try 2–3 and see which one clicks.** There's no wrong answer — the best tool is the one you'll actually use.

What AI Can Do For You Today

→ Draft Emails in 30 Seconds

Instead of spending 15 minutes staring at a blank screen

→ Summarize a 40-Page Report in 60 Seconds

Get the key points without reading every word

→ Turn Meeting Notes into Action Items Instantly

Paste your notes, get a clean action list

→ Write First Drafts of Proposals & Presentations

Start from something, not from nothing

→ Analyze Data & Find Patterns

Spot trends you'd miss in a manual review

What AI Cannot Do (Yet)

Replace Your Judgment

Your experience and expertise remain irreplaceable

Guarantee 100% Accuracy

Always verify important facts and figures

Understand Internal Politics

It doesn't know your company's culture or dynamics

Feel Empathy

Human connection with clients is still yours alone

Access Private Company Data

Unless specifically configured and approved by IT

Remember:

AI is a co-pilot. You are still the pilot.

The goal is to make you faster, sharper, and more effective — not to replace what makes you valuable.

The Privacy Question

01

Free Versions May Use Your Inputs

Free AI tools may use your conversations for model training

02

Paid/Enterprise Versions Typically Do Not

Business and enterprise tiers usually have stronger data protections

03

Never Put Confidential Data in Free Tools

Client data, financials, trade secrets — keep them out

04

Ask Your IT Department

Find out which tools are approved for your organization

The Golden Rule: Would you email this to a stranger? If no, don't paste it into a free AI tool.

Live Demo: AI in Action

Watch how fast AI can:

1

Summarize a Complex Document

2

Draft a Professional Email

3

Create a Meeting Agenda

4

Analyze a Simple Dataset

This is not science fiction. This is Tuesday morning.

Hour 1 Key Takeaways

Powerful Assistant

AI is a tool, not a replacement for your skills and judgment

The Big 4

ChatGPT, Claude, Copilot, and Gemini
— all free to start

Start Free

Free versions are surprisingly capable for most tasks

Protect Your Data

Never put confidential information into free AI tools

Direction = Advantage

The person who directs AI well has the career edge

10-Minute Break

Grab coffee, stretch,
check your phone.

When we come back: **you start USING AI for your actual job.**

Quick Check-In

How are you feeling about AI now compared to when you walked in?

More Confident?

You now know what AI actually is and what it can do for you

Less Confused?

The jargon is gone — it's just a very smart, fast assistant

Ready to Try It?

Good. Because that's exactly what's coming next.

HOUR 2

Prompt Engineering for Your Job

The Skill That Makes AI Actually Useful

TO BECOME A P ENGINEER IN 202

**BUILD
PROMPT
LIBRARIES**

**COLLABORATE
WITH
DEVELOPERS**

What Is a Prompt?

A prompt is simply **what you type** into the AI.

Bad Prompt

Bad result — vague, generic, unhelpful output

Good Prompt

Great result — specific, useful, exactly what you needed

Same AI. Completely different output. Prompt engineering is learning how to **ask AI the right way**. It's not coding. It's communication.

The #1 Mistake People Make

They type vague, one-line prompts:

“Write me an email” “Help me with my presentation” “Analyze this data”

That's like telling an intern "**do something useful**" and walking away.

📌 **Give AI context, specifics, and a clear ask.** The more you put in, the more you get out.

The RACE Framework

Your new best friend for writing prompts:

R — Role

Tell AI who to be. "You are a senior financial analyst..."

C — Context

Background information. "For a Fortune 500 bank's Q3 results..."

A — Action

What exactly you want done. "Write a quarterly summary..."

E — Expectations

Format and tone. "Professional tone, 3 paragraphs, include recommendations..."

RACE in Action

"You are a senior financial analyst (**R**). Write a quarterly summary (**A**) for a Fortune 500 bank's Q3 results (**C**). Professional tone, 3 paragraphs, include recommendations (**E**)."

30

Seconds of Specificity

That's all it takes to dramatically improve your output

10x

Better Output

Specific prompts produce dramatically more useful results

Before & After: Email Prompt

✗ BEFORE (Vague)

"Write an email to my team about the project update."

Generic. Could apply to any team, any project, anywhere.
Useless.

✓ AFTER (Using RACE)

"You are a project manager at a pharmaceutical company. Write a concise email to a team of 8 updating them on the Q2 clinical trial timeline. The trial is 2 weeks behind due to vendor delays. Tone: professional but reassuring. Include 3 action items. Under 200 words."

Same AI. Dramatically better result.

Before & After: Data Analysis

✗ BEFORE

|"Look at this spreadsheet."

No role. No goal. No audience. AI has nothing to work with.

✓ AFTER

"You are a data analyst. I'm pasting quarterly sales data for our Northeast region. Identify top 3 trends, flag anomalies, recommend 2 actions. Bullet points for a VP-level audience."

Role. Action. Context. Expectations. Every time.

INTERACTIVE WORKSHOPS

Hands-On Exercise 1

Open ChatGPT, Claude, or any AI tool on your device.

Write a prompt for something you ACTUALLY do at work:

Option A

A recurring email
you write every
week

Option B

A report you have
to prepare regularly

Option C

Meeting prep for
your next meeting

Use the RACE framework. You have 5 minutes. Go!

Advanced Prompt Techniques

Chain of Thought

Ask AI to think step-by-step. Add "Think through this carefully before answering" or "Walk me through your reasoning." You'll get more accurate, nuanced results on complex tasks.

Few-Shot Examples

Show AI what you want by providing 1–2 examples of the output format or style. "Here's an example of the kind of email I write... now write one for this situation."

Iteration

Don't accept the first draft. Ask for improvements: "Make it shorter," "Make it more formal," "Add a stronger call to action." The best results come from back-and-forth.

Prompt Templates for Monday

Weekly Status Report

"You are a [role]. Write a weekly status report for [team/manager]. This week: [accomplishments]. Blockers: [issues]. Next week: [plans]. Professional tone, bullet format."

Client Email

"You are a [role] at [company type]. Write a professional email to [client type] about [topic]. Tone: [tone]. Key points: [points]. Under [word count] words."

Document Summary

"Summarize the following document for a [audience] audience. Highlight the 3 most important points and any action items. [Paste document]."

Meeting Agenda

"Create a [duration] meeting agenda for [meeting purpose] with [attendees]. Include time blocks, discussion points, and a decision/action item for each section."

Hands-On Exercise 2

01

Pick a REAL Task

Choose something from your actual job — not a hypothetical

02

Write the Prompt Using RACE

Role, Action, Context, Expectations — all four elements

03

Run It in Your AI Tool

Hit send and see what comes back

04

Iterate

Ask for 1 specific improvement to the output

📄 Share your results with the person next to you. **5 minutes.**

Industry-Specific Prompts

Finance & Banking

Risk analysis memos, compliance documentation, regulatory summaries, quarterly performance narratives for executive audiences

Pharmaceutical / Healthcare

Clinical trial summaries, regulatory submission outlines, patient communication drafts, protocol deviation reports

Technology / IT

Change management communications, project risk assessments, incident post-mortems, stakeholder update emails

Hour 2 Key Takeaways

Prompts Are Communication, Not Code

If you can write a clear email, you can write a great prompt

Use the RACE Framework Every Time

Role, Action, Context, Expectations — your four-part formula

Specific Prompts Get Specific Results

Vague in, vague out. Specific in, useful out.

Always Iterate

The first draft is rarely the final draft — push for better

You Have Templates for Monday

Four fill-in-the-blank prompts ready for your most common tasks

You Just Leveled Up

You went from "AI gives me generic garbage" to "AI gives me exactly what I need."

95% of professionals don't have this skill. Now you do.

HOURL 3

AI Agents & Automation

How AI Handles the Work You Hate

Used In AI Workflow

age

APIs

Intellig
Pr

No-Code AI
Platforms

Optical Character
Recognition

Made by **Digitalfirst.ai**

From Chatbot to Agent

What You've Been Doing

You type → AI responds. Back and forth. You're still doing the work of initiating every task.

Think of it like a **calculator** — powerful, but you have to press every button.

What's Coming Next

AI that **DOES the work FOR you**, 24/7, without you having to ask each time.

Think of it like an **accountant** — you set the rules, they handle the work.

What Is an AI Agent?

Software that operates autonomously on your behalf:

❏ **Example:** AI answers your phone, qualifies the caller, books an appointment — at 2 AM on Sunday. While you sleep.

Real Example: Call2Calendar

Brandon's actual business.

The Problem

Small businesses miss **60% of calls** — that's 60% of potential revenue walking out the door

The Solution

AI voice agent — 24/7, natural conversation, qualifies callers, books appointments, sends confirmations automatically

The Result

Businesses capture revenue they were previously losing every single night and weekend

Live Demo: AI Voice Agent

Let's call the AI agent live:

01

Answers Immediately

No hold music, no voicemail — instant pickup every time

02

Asks Qualifying Questions

Gathers the information a human receptionist would collect

03

Offers Available Times

Checks the calendar in real time and presents options

04

Books the Appointment

Confirms the slot and adds it to the calendar automatically

05

Sends Confirmation

Texts and emails the customer — all without human involvement

Running right now for real businesses.

Workflow Automation

Make.com

Visual drag-and-drop builder. Connects 1,500+ apps. See your automation as a flowchart. Great for complex, multi-step workflows.

Zapier

User-friendly, simple automations. The easiest starting point for most people. Thousands of pre-built templates.

"When THIS happens in App A, do THAT in App B." **No coding required.**

Automation Examples

Managers

Auto onboarding sequences triggered when a new hire is added. Compiled weekly reports delivered to your inbox every Monday at 8 AM — without you lifting a finger.

Sales

Lead qualifies via form → meeting booked automatically → prep document sent to rep before the call. The whole sequence runs while you're in another meeting.

Operations

Invoice processed → anomalies flagged → routed to the right approver. Exception-based management instead of manual review of every document.

Brandon's Business Results

302 Photo Booth

Every booking used to require **2 hours** of back-and-forth emails, contracts, and confirmations.

After automation: **0 minutes**. The system handles everything from inquiry to signed contract to payment confirmation.

Tri-State Aquatic (Pool Service)

Scheduling, customer communication, and route management used to require a dedicated admin person.

After automation: **1 person manages what used to require 3**. The savings fund growth instead of overhead.

The Compound Effect

30

Min/Week Per
Automation

A single automation saves 30
minutes every week

5hrs

Weekly with 10
Automations

Ten automations running = 5
hours back every week

260

Hours Saved Per Year
That's more than 6 full work
weeks returned to you

2,600

Hours for a Team of 10
65 work weeks of capacity —
without adding headcount

What Can YOU Automate?

Same-Way Tasks

Anything you do the exact same way every time

Copying Data Between Systems

Moving info from one app to another manually

Repeated Emails

Confirmation emails, follow-ups, status updates

Multi-Source Reports

Pulling data from multiple places into one document

Follow-Up Tracking

Remembering to check in, send reminders, close loops

 If it's repetitive and rule-based, AI can do it.

Hands-On Exercise 3

Write down 3 tasks from your job that:

1. You Do Repeatedly

Daily, weekly, or monthly — same task, over and over

2. Follow a Predictable Pattern

The steps are always roughly the same

3. Don't Require Deep Judgment

A clear rule could govern the decision

📌 **These are your automation candidates.** Write them down — you'll use them in Hour 4.

Hour 3 Key Takeaways

AI Agents Take Action Automatically

Not just responding to you — proactively doing work on your behalf

Voice Agents Work 24/7

Answering calls, qualifying leads, booking appointments while you sleep

Make.com and Zapier Need No Coding

Visual builders that anyone can use to connect their apps

Real Businesses Save Hundreds of Hours Per Year

Not theoretical — Brandon's businesses are proof

You Identified 3 Automation Candidates

Your personal list of tasks ready to be handed off to AI

10-Minute Break

Last break. Have
your devices charged
and ready.

When we come back: **you set up 3 AI tools on your own device.**

HOUR 4

Build Your AI Toolkit

Set Up 3 Tools Before You Leave This Room

The Goal

You will leave with:

AI Assistant Set Up for Daily Use

Configured with custom instructions for YOUR specific job

Prompt Library Saved for Monday

Your personal collection of RACE-framework prompts ready to use

One Automation Mapped Out

A clear plan for your first workflow automation

❏ Plus: Your **Monday Morning Action Plan** — so the momentum doesn't stop when you walk out.

Tool 1: Your AI Assistant

01

Go to chat.openai.com or claude.ai

Open your browser right now — both work on any device

02

Create a Free Account

Email address and password — takes under 2 minutes

03

Set Up Custom Instructions for YOUR Job

Tell the AI your role, your industry, your preferred output format — so every conversation starts with context

5 minutes — do it now. Don't wait until Monday. Do it while you're here with support.

Tool 2: Your Prompt Library

Create "My AI Prompts"

A simple document — Google Doc, Word file, or Notes app — where you save your best prompts.

Start with the **5 starters** from today's workshop.

How It Grows

Every time you write a great prompt, save it. Every time you find a template that works, add it.

The best libraries grow to **20–50 prompts**, each saving 10–30 minutes per use.

Tool 3: Map Your First Automation

Task	Frequency	Time Now	Trigger	Steps	Time Saved
Your most repetitive task	Daily / Weekly	__ minutes	What starts it?	What happens?	__ min/week

Pick the task from your Exercise 3 list that is most repetitive and most rule-based. Map it out in the table above. This becomes your first automation project.

 You don't have to build it today — just mapping it is the first step. **Clarity precedes action.**

The ROI Calculator

Weekly
Savings

Annual
Hours

Annual Value

\$5K

Low End

Conservative estimate for most professionals

\$25K

High End

For power users with multiple automations

📌 **That's a raise you're giving yourself.** No negotiation required.

Monday Morning Action Plan

📌 **The difference between today and next year is one Monday morning.**

AI Tool Quick Reference

Tool	Best For	Cost	URL
ChatGPT	Writing, analysis	Free / \$20 mo	chat.openai.com
Claude	Long docs, detail	Free / \$20 mo	claude.ai
Copilot	Microsoft 365	\$30 mo	copilot.microsoft.com
Gemini	Google, research	Free / \$20 mo	gemini.google.com
Make.com	Automation	Free / \$9 mo	make.com
Zapier	Automations	Free / \$20 mo	zapier.com

Common Questions

"Will AI take my job?"

A person who uses AI will. The question isn't whether AI changes your industry — it's whether you're ahead of that change or behind it.

"Is my data safe?"

Use paid or enterprise versions for sensitive data. Never put confidential information into free tools. When in doubt, ask your IT department.

"I'm not technical — can I really do this?"

If you can write an email, you can write a prompt. No coding. No technical background required. You proved it today.

"My company doesn't allow it yet."

Ask IT about approved tools. Be the champion who brings the business case. Early adopters inside organizations become the go-to experts.

What We Covered Today

4 Hours That Changed Your Relationship With AI:

Hour 1

You understand the AI landscape — the tools, the limits, and the real opportunity

Hour 2

You get useful results from any AI tool using the RACE framework

Hour 3

You've seen what's possible with agents and automation — and identified your own candidates

Hour 4

3 tools set up and a concrete plan for Monday morning

You invested 4 hours. **The return starts Monday morning.**

Ready to Go Deeper?

AI Starter Pack — \$497

Workshop replay, 50+ prompt templates, 30-min 1-on-1 call, 30 days of support, implementation guides, and community access

Advanced 2-Day Workshop — \$997

Weekend intensive, maximum 10 people, custom AI system built for your business, 60 days of ongoing support

Corporate Team Training — \$5,000–\$10,000/day

Custom curriculum, on-site delivery, 10–30 employees, approximately \$250 per person — transformative ROI

AI Consulting — Starting at \$4,997

Full audit, strategic roadmap, implementation support, team training, and 90 days of hands-on guidance

Today-Only Pricing — Save 10%

AI Starter Pack

~~\$497~~ → **\$447 today only**

Advanced Workshop

~~\$997~~ → **\$897 today only**
