

AI Hands-On Workshop

Walk Out With 3 Tools Working For Your Job

Brandon Calloway | Learn & Leverage AI

SATURDAY WORKSHOP

9:00 AM – 1:00 PM

Today's Agenda

4 Hours. 4 Skills. 3 Tools Working By 1 PM.

Time	Session	What You'll Do
9:00 – 10:10	What AI Actually Is	Use AI for the first time
10:20 – 11:20	Prompt Engineering	Master the RACE framework
11:30 – 12:30	AI Agents & Automation	See real AI agents in action
12:40 – 1:25	Build Your AI Toolkit	Set up 3 tools on your laptop

About Your Instructor

Brandon Calloway

AI Practitioner, Not Professor

- Runs **5 businesses** powered by AI daily
- Built AI voice agents, automation systems, and consulting workflows
- Clients include small businesses and corporate teams
- **Philosophy:** If I can't show you it working, I won't teach it

"I'm going to show you exactly what I do — then you're going to do it yourself."

The Promise

By 1:00 PM today, you will have:

1

Used AI

Complete a real work task with
AI assistance

2

Mastered a Framework

A prompt framework that works
every single time

3

3 AI Tools

Set up and working on your laptop right now

This is not a lecture. You will leave this room with skills you use
Monday morning.

Hour 1

What AI Actually Is

9:10 – 10:10

What Is AI, Really?

The Core Truth

AI is a prediction machine.

It predicts the **next word** based on patterns in billions of documents. It is **not** magic, not sentient, not thinking.

Think of it as **very sophisticated autocomplete**.

It's trained on the internet — books, articles, code, conversations.

The Key Insight

AI doesn't "know" things. It predicts what text should come next — and it's incredibly good at it.

Not Magic

No sentience, no independent thought

Pattern-Based

Trained on billions of real documents

Incredibly Capable

Prediction at massive scale = powerful results

The Big 4 AI Tools

Tool	Made By	Best For	Cost
ChatGPT	OpenAI	General tasks, writing, analysis	Free / \$20/mo
Claude	Anthropic	Long documents, nuanced writing	Free / \$20/mo
Copilot	Microsoft	Office 365 integration	Free / \$20/mo
Gemini	Google	Google Workspace, research	Free / \$20/mo

Start with one. ChatGPT or Claude are the best entry points.

All have free tiers. **No credit card needed to start.**

What AI Can Do

Write

Emails, reports, proposals,
presentations

Summarize

Long documents in seconds

Analyze

Data, patterns, charts

Brainstorm

Ideas, strategies, solutions

Explain

Complex topics in simple language

Code

Websites, automations, tools

Translate

Between languages instantly

What AI Cannot Do

Replace Your Judgment

It assists — you decide. Human oversight is always required.

Guarantee Accuracy

Always verify important facts. AI can be confidently wrong.

Access Your Company Systems

It only knows what you tell it in the conversation.

Think Independently

It responds to what you ask — nothing more, nothing less.

Keep Secrets

Don't paste confidential data into public AI tools.

Replace You

But someone using AI might. Stay ahead of the curve.

Live Demo: 3 Things AI Can Do Right Now

1

Demo 1

Summarize a 3-page report into 5 bullet points

2

Demo 2

Write a professional email declining a meeting

3

Demo 3

Explain quarterly results like you're new to finance

❏ *No coding. No special software. Just type what you need in plain English.*

Exercise: Your First AI Conversation

Open ChatGPT or Claude on your laptop right now.

Pick one of these starter prompts:

1

Email Summary

"Summarize this email thread and list the action items" — paste a recent email

2

Email Reply

"Write a professional response to this email" — paste an email you need to reply to

3

Job Explainer

"Explain [something from your job] to someone outside my department"

Or ask it anything useful for YOUR job. You have 20 minutes.

You talked to AI

You initiated a real conversation with an AI tool

It talked back

The AI responded with something meaningful

It was useful

The output had real value for your work

What Just Happened

That's it. That's the foundation.

No coding. No technical skills. Just a conversation.

Privacy & Safety Basics

The 3 Rules

1 Don't paste confidential company data
Keep sensitive information out of free, public AI tools.

2 Turn off training
In settings, opt out of "improve our models" to protect your inputs.

3 Verify important facts
AI can be confidently wrong. Always double-check critical information.

 **For work use:** Ask your IT department about approved AI tools. Many companies now have enterprise versions with stronger privacy protections.

Hour 1 Recap

✓ AI Works

You saw it in action with real tasks

✓ You Can Use It

No coding, no technical background needed

✓ It's Useful

For your actual job, starting today

Next up: How to go from "okay results" to "incredible results" — every single time.

HOUR 2

Prompt Engineering for Your Job

10:20 – 11:20

The Secret to Getting Great Results

Same AI + Bad Prompt

= **Bad Result**

Vague, generic, unusable output that wastes your time.

Same AI + Great Prompt

= **Great Result**

Exactly what you need, ready to use immediately.

It's not about the AI tool. It's about what you type. The difference? **A framework.**

The RACE Framework

R — Role

Who should the AI be?

A — Action

What do you want done?

C — Context

What background info does it need?

E — Expectations

What format, length, tone?

This is the difference between getting garbage and getting gold.

Bad Prompt vs. RACE Prompt

✗ Bad Prompt

| *"Write me an email."*

Result: Generic, vague, useless.

✓ RACE Prompt

*"You are a senior project manager at a pharmaceutical company (**Role**). Write an email to my team (**Action**) about the timeline change on the Q3 clinical trial review – deadline moving from June 15 to May 30 due to FDA feedback (**Context**). Keep it under 200 words, professional but not stiff, include 3 action items (**Expectations**)."*

Result: Exactly what you need. Ready to send.

RACE in Action: More Examples

For a Financial Analyst

"You are a financial analyst at a Fortune 500 bank. Create a summary of this quarterly data for my VP. Focus on trends and anomalies. Use bullet points, under 300 words."

For a Marketing Manager

"You are a B2B marketing strategist. Write 3 LinkedIn post options promoting our new compliance training. Professional tone, each under 150 words, include a call-to-action."

For an Operations Director

"You are an operations consultant. Review this process workflow and identify 3 bottlenecks. Explain each in one paragraph with a recommended fix."

The Power of Iteration

Your first prompt doesn't have to be perfect.

AI is a **conversation**, not a one-shot. Each follow-up makes the output better. Think of it as working with a smart colleague.

"Make it shorter"

"More professional tone"

"Add specific numbers"

"Rewrite for non-technical audience"

"Give me 3 alternative versions"

Live Demo: Before & After

1

Demo 1

Bad prompt vs. RACE prompt — same task, dramatic difference in quality

2

Demo 2

Iteration — take a result and refine it 3 times, watching quality improve

3

Demo 3

Data analysis — paste a table of numbers, get instant insights

📺 *Watch how the quality jumps when you give AI the right instructions.*

Exercise: Write YOUR Job Prompt

Using the RACE framework, write a prompt for a REAL task from your job.

1

Professional Email

Write a professional email for a situation you're dealing with right now

2

Document Summary

Summarize a long document you've been putting off reading

3

Meeting Prep

Create talking points for a meeting you have next week

4

Data Analysis

Analyze a set of numbers or data from your work

5

Project Update

Draft a project update for your boss

Write the prompt on your worksheet first. Then type it into AI. You have 20 minutes.

The Before & After Moment

Who got a dramatically better result using RACE?

The difference between a beginner and a power user isn't intelligence.

It's knowing how to communicate with AI.

You just learned a skill that **95% of professionals don't have.**

The Most Important Slide Today

✗ Old Reality

"AI doesn't replace people."

✓ New Reality

"People who use AI replace people who don't."

You just joined the right side of that equation.

Hour 2 Recap

01

The RACE Framework

Role, Action, Context, Expectations — your new superpower

02

Iteration

Every follow-up makes the output better — it's a conversation

03

Your Real Job Prompt

You wrote a prompt for your actual work situation

04

Rare Skill Acquired

You have a skill most professionals don't

Next up: What happens when AI doesn't just write — it takes action.

HOUR 3

AI Agents & Automation

11:30 – 12:30

From AI Chat to AI Agents

Chat AI	AI Agent
Answers questions	Books appointments
Writes text	Sends emails
Analyzes data	Processes forms
You drive	It drives (with your rules)

Think of an AI agent as a **digital coworker who works 24/7**, never calls in sick, and follows your exact instructions.

Real Example: Call2Calendar

An AI voice agent that answers the phone.

- 1 Customer Calls**
A customer calls the business at any hour
- 2 AI Answers**
Sounds natural, has a real conversation, asks the right questions
- 3 Books Appointment**
Directly on the calendar – no human needed
- 4 Confirms & Follows Up**
Sends a confirmation text automatically

📌 **This is running RIGHT NOW for real businesses.** Works 24/7 – nights, weekends, holidays.

Live Demo: Call the AI

Let's call it. Right now. On speakerphone.

Answer the Phone

Watch how naturally the AI picks up and greets the caller

Natural Conversation

Listen for how it handles questions and unexpected responses

Book the Appointment

Watch it confirm all details and complete the booking in real time

Real Example: Tri-State Aquatic

AI running a pool service company.

Customer Scheduling

AI handles all booking and rescheduling automatically

Follow-Ups

Automatic reminders and check-ins sent without lifting a finger

Operations

Route optimization and task management handled by AI

Customer Service

Common questions answered instantly, 24/7

Result: Owner focuses on growth, not phone calls.

Real Example: 302 Photo Booth

AI handling event bookings automatically.

Inquiry

AI Reply

Quote

Follow-up

Book

Before AI

45 minutes of back-and-forth emails
per booking

After AI

2 minutes — automatically. Same
result, 95% less time.

Automation Tools: No Coding Required

Make.com & Zapier: "If THIS happens, THEN do THAT."

→ Email with attachment arrives

→ AI summarizes it → Sends you a Slack message

→ New form submission

→ AI qualifies the lead → Adds to CRM

→ Meeting scheduled

→ AI creates agenda → Sends prep notes to attendees

→ Invoice received

→ AI extracts data → Updates spreadsheet

📋 **No coding. Drag and drop. Connect your existing tools.**

The Automation Math

Let's calculate YOUR time savings.

Your Task	Time Now	With AI	Weekly Savings
Email writing	30 min/day	5 min/day	2 hrs/week
Meeting prep	45 min each	10 min each	2.5 hrs/week
Data entry	1 hr/day	10 min/day	4 hrs/week
Report writing	3 hrs/week	45 min/week	2.25 hrs/week

10+

Hours Saved

Per week with AI automation

What's your hourly rate? **Multiply.** That's what AI is worth to you annually.

Live Demo: Automation in Action

Zapier Demo

When I get an email with an attachment, AI summarizes it and sends me a Slack message with the summary.

Watch it run in real time.

The Numbers

10

Minutes to Set Up

30

Minutes Saved
Daily

Exercise: Find Your 3 Automatable Tasks

Grab your worksheet. List 5 tasks you do every week that are repetitive.

1

How long does it take?

Estimate the time per occurrence honestly

2

How often do you do it?

Daily? Weekly? Multiple times per day?

3

Could AI help?

Is it repetitive, rule-based, or text-heavy?

Circle your top 3 candidates for automation. Calculate your total time saved per week. You have 20 minutes.

What You Just Did

You identified WHERE AI can help in YOUR specific job.

Most people at your company haven't done this.

A List of Automatable Tasks

Specific to your role and responsibilities

Time Savings Calculated

Real numbers, not estimates — your actual hours back

A Concrete Starting Point

You know exactly where to begin on Monday

"Start small. Use AI for YOUR productivity first. When your boss sees you producing twice the output, they'll ask how."

Hour 3 Recap

01

AI Agents Take Action

They don't just answer questions — they do things

02

Real Businesses Using This Now

You heard a live AI agent on the phone

03

Automation Tools

Connect your existing apps without any coding

04

Your 3 Tasks Identified

You know exactly where AI can save you time

📌 **Next up:** Let's stop talking about it and actually build your toolkit.

Hour 4

Build Your AI Toolkit

12:40 – 1:25

Your 3-Layer AI Toolkit

1

Layer 1: AI Assistant

Daily tasks — email, writing, analysis

2

Layer 2: AI Writing Partner

Professional-quality output every time

3

Layer 3: First Automation

Save time on one repetitive task

By the end of this hour, all 3 will be set up on your laptop.

Tool 1: Set Up Your AI Assistant

Custom Instructions = AI That Already Knows You

Instead of explaining who you are every time, **tell it once.**

"You are an AI assistant for [Your Name]. I work as a [Title] at [Company] in [Industry]. When I ask for help, be practical and concise. Give me specific action steps. Use a professional but conversational tone. Format responses with bullet points and headers."

📌 **Let's set this up right now.** Open your AI tool's settings and paste your custom instructions.

Tool 2: Your AI Writing Partner

Set up a reusable "Professional Editor" prompt.

"Review my writing for clarity, professionalism, and conciseness. Suggest improvements but keep my voice. Point out anything that could be misunderstood. Format your suggestions as: Original → Suggested, with a brief explanation."

Use it for:

 Emails

Before you send them

 Reports

Before you submit them

 Proposals

Before you present them

 Any Writing

Anything important

Tool 3: Your First Automation

Let's connect two tools you already use.

Option A: Zapier (Free)

Set up a simple automation in 5 minutes — right now, in this room.

Option B: Follow the Workbook

Step-by-step instructions to set up at home at your own pace.

Popular first automations:

→ Email summary → Slack notification

→ Calendar event → Prep notes generated

→ Form submission → Spreadsheet + notification

Your Monday Morning Action Plan

Fill out your worksheet now.

Question	Your Answer
One task I'll do with AI this week	_____
The AI tool I'll use	_____
The prompt I'll start with	_____
Time I expect to save per week	_____
One person I'll show this to	_____

The tools only matter if you use them. Start with ONE task. Do it with AI for a week. Then add a second.

The ROI Calculator

What's one hour of your time worth?

If AI saves you **5 hours this week**:

Your Rate	Weekly Value	Annual Value
\$50/hr	\$250/week	\$13,000/year
\$75/hr	\$375/week	\$19,500/year
\$100/hr	\$500/week	\$26,000/year
\$150/hr	\$750/week	\$39,000/year

 **This isn't theoretical.** You have the tools set up. You've used them. The number is real.

The Habit Stack

Week 1

Use AI for one task every day — build the habit

Week 3

Set up one automation — let AI work while you sleep

Week 2

Add a second task — expand your AI usage

Week 4

You're an AI power user — ahead of 95% of your peers

The gap between "**I know about AI**" and "**I use AI**" is one week of practice.

Hour 4 Recap

Custom AI Assistant

Set up with your personal instructions — it knows who you are

AI Writing Partner

Ready to review and improve your work before it goes out

First Automation

Connected (or instructions saved) — your first hands-free workflow

Monday Morning Plan

Written and ready — you know exactly what to do first

 **You now have 3 AI tools working on your laptop.**

CLOSING

What We Covered Today

What You Accomplished Today

1

Hour 1: AI Foundations

You learned what AI actually is and used it successfully for the first time

2

Hour 2: Prompt Mastery

You mastered the RACE framework and wrote prompts for your real job

3

Hour 3: Agents & Automation

You saw real AI agents in action and identified your automatable tasks

4

Hour 4: Your Toolkit

You set up 3 AI tools and created your Monday morning action plan

Quick show of hands — how many of you feel more confident about AI right now than you did at 9 AM?

Ready to Go Deeper?

Today was the foundation. Here's what comes next.

Offer	What You Get	Investment
AI Starter Pack	Workshop recording + 50 prompt library + 30-min 1-on-1 setup call	\$497
Advanced Workshop	2-day intensive, capped at 10. Build custom AI systems for your role	\$997
Corporate Team Training	On-site training customized for your industry and team	\$5,000 – \$10,000
AI Consulting	Full AI assessment, roadmap, and implementation for your business	\$4,997+

Today Only: 10% Off Everything

Scan the QR code before you leave this room.

AI Starter Pack

\$497 → \$447

Advanced Workshop

\$997 → \$897

Corporate & Consulting

Talk to **Brandon directly** for custom pricing

"If you're the kind of person who acts while the energy is high — this is your moment. Once you walk out that door, life gets busy."

Brandon will be here for the next 30 minutes. Grab him for any questions.
